EWO 50C – High Frequency Internal Vibrator

CONCRETE VIBRATORS: EWO 50C – High Frequency Internal Vibrator

EWO Electric High Frequency Concrete Vibrator are equipped with a small electronic frequency converter integrated into the power cable, suitable for connection to a single phase mains socket. This line of vibrator is characterised by high centrifugal force, constant speed and increased wear resistance which makes it suitable even for the most consistent types of concrete and for continuous use. The shaft is supported by four bearings for extra heavy-duty work requirements.
